Abstract of the Disclosure

10

A system (20) for converting data in a first hierarchical data scheme into a second hierarchical data scheme includes a template (22) that defines the second hierarchical data scheme. A dynamic data generation module (24) is contained in the template (22). A data source (26) is in communication with the dynamic data generation module (24) and contains data in the first hierarchical data scheme. The template (22) provides a format for mapping the data between the two data schemes.
